

PRESS RELEASE

February 2022

IO.MOI s.m.p.c introduces The World`s First Photovoltaic Umbrella - IO.MOI PV.U

Thessaloniki, Greece - **IO.MOI s.m.p.c**, introduces the first umbrella with integrated photovoltaic panels. Also known as **IO.MOI PV.U**, the PhotoVoltaic Umbrella uses small PET laminated monocrystallic panels that are integrated into the umbrella`s fabric. The eight pv panels used are connected to a USB charger that is located on the inside of the umbrella and can give power to every small device that charges under 5V. The USB charger can give a maximum of 1,3 Amps to the device connected, making the PV.U one-of-a-kind gadget for the beach!

The Photovoltaic Umbrella was released as a trial last summer, and the feedback that was received was astonishing! People made use of the PV.U on the beach, mostly wanting to charge their phones or power banks, but also enjoyed the great shade that is created by the double fabric inside!

The **IO.MOI PV.U** is currently on the Indiegogo Crowdfunding platform, and will give away perks until the end of March! You can join the future of Photovoltaic Umbrellas by joining the community or backing up the campaign at:

- Campaign page : <https://igg.me/at/pvu/x#/>
